Paper : MAT–HC–4016

(Multivariate Calculus)

Full Marks : 80

Time : Three hours

**The figures in the margin indicate
full marks for the questions.**

1. Answer *any ten* :   1×10=10

   (i)   Find the domain of $f(x, y) = \dfrac{1}{\sqrt{x-y}}$.

   (ii) How is directional derivative of a
         function at a point related to the
         gradient of the function at that point ?

   (iii) Define harmonic function ?

   (iv) Define $\displaystyle\iint_{R} f(x, y)\, dA$.

(v) Write the value of $\vec{\nabla}(f^n)$.

(vi) Define critical point.

(vii) Define relative extrema for a function of two variables.

(viii) When is a curve said to be positively oriented ?

(ix) Describe the fundamental theorem of line integral.

(x) When is a surface said to be smooth ?

(xi) Compute $\int_1^4 \int_{-2}^3 \int_2^5 dx\,dy\,dz$.

(xii) Evaluate $\underset{(x,y)\to(1,3)}{Lt} \dfrac{x-y}{x+y}$.

(xiii) If $f(x,y) = x^3y + x^2y^2$, find f_x.

(xiv) When is a line integral said to be path independent ?

(xv) Explain the difference between $\int_C f\,ds$ and $\int_C f\,dx$.

2. Answer *any five* questions :   2×5=10

(a) Sketch the level surface $f(x,y,z) = c$ if $(x,y,z) = y^2 + z^2$ for $c = 1$.

(b) Determine f_x and f_y for
$$f(x,y) = xy^2 \ln(x+y).$$

(c) Find $\dfrac{\partial w}{\partial t}$ if $w = \ln\left(x + 2y - z^2\right)$ and
$$x = 2t - 1, \ \ y = \dfrac{1}{t}, \ z = \sqrt{t}.$$

(d) Evaluate $\int_1^2 \int_0^\pi x\cos y\,dy\,dx$.

(e) Evaluate $\underset{(x,y)\to(0,0)}{Lim} \dfrac{x^2 + x - xy - y}{x - y}$.

(f) Define line integral over a smooth curve.

(g) Find the Jacobian $\dfrac{\partial(x,y)}{\partial(u,v)}$ when
$$x = u + 2v, \ y = 3u - 4v.$$

(h) Using polar coordinates find the limit
$$\underset{(x,y)\to(0,0)}{Lim} \dfrac{\tan(x^2 + y^2)}{x^2 + y^2}.$$

3. Answer **any four**: 5×4=20

(a) Describe the graph of the function
$$f(x, y) = 1 - x - \frac{1}{2}y.$$

(b) Use the method of Lagrange's multipliers to find the maximum and minimum values of $f(x, y) = 1 - x^2 - y^2$ subject to the constraints $x + y = 1$ with $x \geq 0$, $y \geq 0$.

(c) Evaluate $\int_C \left[(y - x)dx + x^2 y\, dy \right]$, where C is the curve defined by $y^2 = x^3$ from $(1, -1)$ to $(1, 1)$.

(d) Examine the continuity of the following function at the origin :
$$f(x, y) = \begin{cases} \dfrac{x^2 - y^2}{x^2 + y^2}, & (x, y) \neq (0, 0) \\ 0, & (x, y) = (0, 0) \end{cases}$$

(e) Find $\dfrac{\partial w}{\partial s}$ if $w = 4x + y^2 + z^3$ where
$$x = e^{rs^2}, \quad y = \ln\frac{r + s}{t} \text{ and } z = rst^2.$$

(f) Suppose the function f is differentiable at the point P_0 and that the gradient at P_0 satisfies $\Delta f_0 \neq 0$. Show that Δf_0 is orthogonal to the level surface of f through P_0.

(g) Compute $\iint_D \left(\dfrac{x - y}{x + y} \right)^4 dy\, dx$ where D is the triangular region bounded by the line $x + y = 1$ and the coordinate axes, using change of variables $u = x - y$, $v = x + y$.

(h) Find the absolute extrema of $f(x, y) = 2x^2 - y^2$ on the closed bounded set S, where S is the disk $x^2 + y^2 \leq 1$.

4. Answer **any four** questions : 10×4=40

(a) The radius and height of a right circular cone are measured with errors of at most 3% and 2% respectively. Use increments to approximate the maximum possible percentage error in computing the volume of the cone using these measurements and the formula $V = \dfrac{1}{3} \pi R^2 H$.

(b) Let $f(x, y) = \begin{cases} xy\left(\dfrac{x^2 - y^2}{x^2 + y^2} \right), & (x, y) \neq (0, 0) \\ 0, & (x, y) = (0, 0) \end{cases}$

Show that $f_x(0, y) = -y$ and $f_x(x, 0) = x$ for all x and y. Then show that $f_{xy}(0, 0) = -1$ and $f_{yx}(0, 0) = 1$.

3.

(c) (i) Find the directional derivative of $f(x, y) = \ln(x^2 + y^3)$ at $P_0(1, -3)$ in the direction of $\vec{v} = 2i - 3j$.

(ii) In what direction is the function defined by $f(x, y) = xe^{2y-x}$ increasing most rapidly at the point $P_0(2, 1)$, and what is the maximum rate of increase ? In what direction is f decreasing most rapidly ?

(d) When two resistances R_1 and R_2 are connected in parallel, the total resistance R satisfies $\dfrac{1}{R} = \dfrac{1}{R_1} + \dfrac{1}{R_2}$.

If R_1 is measured as 300 *ohms* with maximum error of 2% and R_2 is measured as 500 *ohms* with a maximum error of 3%, what is the maximum percentage error in R ?

(e) Verify the vector field $\vec{F} = (e^x \sin y - y)i + (e^x \cos y - x - 2)j$ is conservative. Also find the scalar potential function f for $\vec{F}$.

(f) (i) Evaluate $\displaystyle\iiint_D \frac{dx\,dy\,dz}{\sqrt{x^2 + y^2 + z^2}}$ where D is the solid sphere $x^2 + y^2 + z^2 \leq 3$.

(ii) Find the volume of the solid D, where D is bounded by the paraboloid $z = 1 - 4(x^2 + y^2)$ the xy-plane.

(g) (i) Use a polar double integral to show that a sphere of radius a has volume $\dfrac{4}{3}\pi a^3$.

(ii) Evaluate $\displaystyle\int_0^3 \int_0^{\sqrt{9-x^2}} x\,dy\,dx$ by converting to polar coordinates.

(h) State Green's theorem. Verify Green's theorem for the line integral $\displaystyle\oint_C (y^2 dx + x^2 dy)$ where C is the square having vertices $(0, 0)$, $(1, 0)$, $(1, 1)$ and $(0, 1)$.
